

# **Are legislators more responsive to high quality evidence? A field experiment**

---

Angèle Delevoye and Trevor Inceri

29 May 2019

# Introduction

---

- Do policymakers **give more credence** to high quality research?

# Research Questions

- Do policymakers **give more credence** to high quality research?
- Can policymakers **recognize** differences in research quality?

# Theory

---

# Pre-existing literature

- Stuff here

# Evidence standards

- Evidence standards and descriptions already adopted in federal legislation.
  - Secondary Education Act, No Child Left Behind, Every Student Succeeds Act

# Evidence standards

- Evidence standards and descriptions already adopted in federal legislation.
  - Secondary Education Act, No Child Left Behind, Every Student Succeeds Act
- Department of Education standards.
  - Strong causal evidence
  - Moderate causal evidence
  - Low causal evidence
  - High levels of specificity covering cluster-random assignment , IVs , and missingness/attrition , and RDs .

# Evidence standards

- Evidence standards and descriptions already adopted in federal legislation.
  - Secondary Education Act, No Child Left Behind, Every Student Succeeds Act
- Department of Education standards.
  - Strong causal evidence
  - Moderate causal evidence
  - Low causal evidence
  - High levels of specificity covering cluster-random assignment , IVs , and missingness/attrition , and RDs .
- Department of Labor has adopted similar standards.

# DoE evidence standards

Figure II.1. Study Ratings for Individual-Level RCTs and QEDs

# Design

---

# Overview of experimental design

- 2x2 factorial design with two treatments:
  - Evidence standard (low vs. high)
  - Whether evidence standards are explained to policymakers

**Table 1:** Treatment arms: 2x2 factorial design

	<b>Lower Tier</b>	<b>Higher Tier</b>
<b>No information</b>	Control	High and no info
<b>Information</b>	Low and info	High and info

- Stuff here

# Treatment effect estimation

- Block random assignment.
- $ATE = \sum_{j=1}^J \frac{N_j}{N} ATE_j$ 
  - Where  $J$  is the number of blocks, blocks are indexed by  $j$ , and  $\frac{N_j}{N}$  represents the share of subjects who belong to block  $j$ .
- P-values calculated using randomization inference.
- Control group = Low quality evidence + no information

## Heterogenous treatment effects (CATEs)

- Party
- ... ?

# Power analysis: federal

# Power analysis: state

# Power analysis assumptions

- $N = 535$  (federal) and  $1000$  (state)
- Low quality evidence + information provision =  $-10\%$
- High quality evidence + no information provision =  $5\%$
- High quality evidence + information provision =  $12.5\%$
- Standard deviation =  $0.08$

## Conclusion

---

# Questions

- Use a neutral or partisan policy proposal?
  - Partisan policy proposal might allow us to test legislator's motivated reasoning, but power issues.
- Better outcome measurements?
- Suggestions for kind of organization to partner with? Is organizational partnering feasible?
- Federal, state, or local level?
- Other suggestions?

## **Supplemental material**

---

# Evidence tiers

ESSA's definition of "evidence-based" includes 4 levels of evidence. The top 3 levels require findings of a **statistically significant effect** on improving student outcomes or other relevant outcomes based on:

## (1) Strong

- At least 1 well-designed and well-implemented **experimental** study (i.e., randomized)

## (2) Moderate

- At least 1 well-designed and well-implemented **quasi-experimental** study (i.e., matched)

## (3) Promising

- At least 1 well-designed and well-implemented **correlational** study with statistical controls for selection bias

Required for school improvement plans funded by 7% set aside (Section 1003)

&

Eligible for a priority under 7 competitive grants

The 4<sup>th</sup> level is designed for ideas that do not yet have an evidence base qualifying for the top 3 levels above. Given the requirement in the second bullet below to examine the effects of these ideas, this evidence-*building* level can be referred to as "under evaluation."

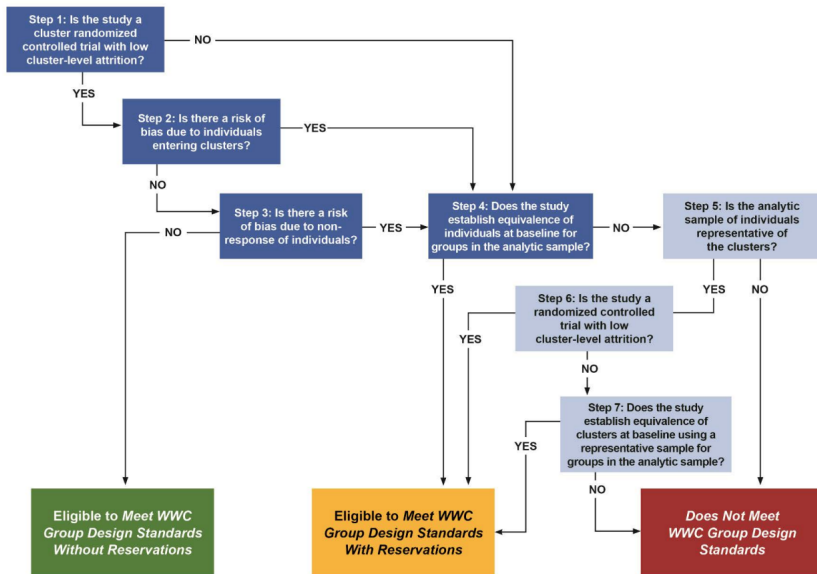

## (4) "Under Evaluation"

- **Demonstrates rationale** based on high-quality research or positive evaluation that such activity, strategy, or intervention is likely to improve student outcomes
- Includes **ongoing efforts to examine the effects** of such activity, strategy, or intervention

Included for all other uses of "evidence-based"

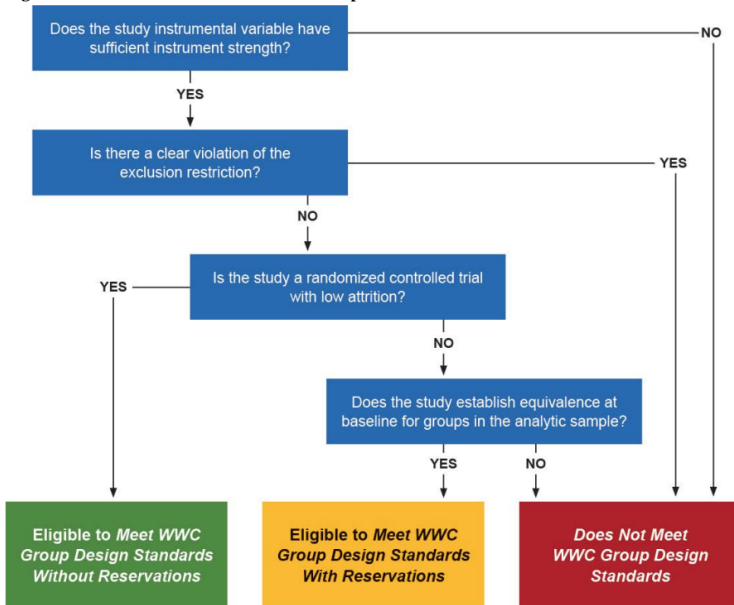

# Evidence tiers: cluster random assignment

Figure II.4. Review Process for Cluster-Level Assignment Studies

# Evidence tiers: instrumental variables

**Figure II.6. Review Process for Studies that Report a CACE Estimate**

# Evidence tiers: missingness and attrition

Figure II.5. Study Ratings for RCTs and QEDs with Missing Outcome or Baseline Data

# Evidence tiers: regression discontinuity

**Table III.1. RDD Study Ratings**

Standard	To be rated <i>Meets WWC RDD Standards Without Reservations</i> , studies must:	To be rated <i>Meets WWC RDD Standards With Reservations</i> , studies must:
1: Integrity of the forcing variable	Completely satisfy	Partially satisfy
2: Sample attrition	Completely satisfy	Partially satisfy at least one of these two standards
3: Continuity	Completely satisfy	
4. Bandwidth/Functional form	Completely satisfy	Partially satisfy
5. Fuzzy RDD	Completely satisfy	Partially satisfy
