

Are legislators more responsive to high quality evidence? A field experiment

Angèle Delevoye, Trevor Incerti and Sōm Duchébaggè

29 May 2019

Introduction

Evidence-based policymaking: a bipartisan goal

H. R. 4174

One Hundred Fifteenth Congress of the United States of America

AT THE SECOND SESSION

*Began and held at the City of Washington on Wednesday,
the third day of January, two thousand and eighteen*

An Act

To amend titles 5 and 44, United States Code, to require Federal evaluation activities, improve Federal data management, and for other purposes.

*Be it enacted by the Senate and House of Representatives of
the United States of America in Congress assembled,*

SECTION 1. SHORT TITLE; TABLE OF CONTENTS.

(a) SHORT TITLE.—This Act may be cited as the “Foundations
for Evidence-Based Policymaking Act of 2018”.

(b) TABLE OF CONTENTS.—The table of contents for this Act
is as follows:

Sec. 1. Short title; table of contents.

TITLE I—FEDERAL EVIDENCE-BUILDING ACTIVITIES

Sec. 101. Federal evidence-building activities.

TITLE II—OPEN GOVERNMENT DATA ACT

Sec. 201. Short title.

Sec. 202. OPEN Government data.

TITLE III—CONFIDENTIAL INFORMATION PROTECTION AND STATISTICAL EFFICIENCY

Sec. 301. Short title.

Sec. 302. Confidential information protection and statistical efficiency.

Sec. 303. Increasing access to data for evidence.

TITLE IV—GENERAL PROVISIONS

Sec. 401. Rule of construction.

Sec. 402. Use of existing resources.

Sec. 403. Effective date.

Ideology Vote Chart

Key: R Yea D Yea R Nay

Research Questions

- Do policymakers **give more credence** to high quality research?

Research Questions

- Do policymakers **give more credence** to high quality research?
- Can policymakers **recognize** differences in research quality?

Theory

Pre-existing literature

- Literature on evidence use in policy-making, on relationship between science, researchers and policy-makers in a democracy
- Existing field/audit experiments reaching out to policy-makers

Figure

Evidence standards

- Evidence standards and descriptions already adopted in federal legislation.
 - Secondary Education Act 65, No Child Left Behind 01, Every Student Succeeds Act 2015 (ESSA)

Evidence standards

- Evidence standards and descriptions already adopted in federal legislation.
 - Secondary Education Act 65, No Child Left Behind 01, Every Student Succeeds Act 2015 (ESSA)
- Department of Education (DoE) standards tiers under ESSA 2015:
 - Strong causal evidence
 - Moderate causal evidence
 - Low causal evidence
 - High levels of specificity covering cluster-random assignment , IVs , and missingness/attrition , and RDs .

Evidence standards

- Evidence standards and descriptions already adopted in federal legislation.
 - Secondary Education Act 65, No Child Left Behind 01, Every Student Succeeds Act 2015 (ESSA)
- Department of Education (DoE) standards tiers under ESSA 2015:
 - Strong causal evidence
 - Moderate causal evidence
 - Low causal evidence
 - High levels of specificity covering cluster-random assignment , IVs , and missingness/attrition , and RDs .
- Other federal agencies have adopted similar standards 

DoE evidence standards under ASSA 2015

ESSA's definition of "evidence-based" includes 4 levels of evidence. The top 3 levels require findings of a **statistically significant effect** on improving student outcomes or other relevant outcomes based on:

(1) Strong

- At least 1 well-designed and well-implemented **experimental** study (i.e., randomized)

(2) Moderate

- At least 1 well-designed and well-implemented **quasi-experimental** study (i.e., matched)

(3) Promising

- At least 1 well-designed and well-implemented **correlational** study with statistical controls for selection bias

Required for school improvement plans funded by 7% set aside (Section 1003)

&

Eligible for a priority under 7 competitive grants

The 4th level is designed for ideas that do not yet have an evidence base qualifying for the top 3 levels above. Given the requirement in the second bullet below to examine the effects of these ideas, this *evidence-building* level can be referred to as "under evaluation."

(4) "Under Evaluation"

- **Demonstrates rationale** based on high-quality research or positive evaluation that such activity, strategy, or intervention is likely to improve student outcomes
- Includes **ongoing efforts to examine the effects** of such activity, strategy, or intervention

Included for all other uses of "evidence-based"

Design

Overview of experimental design

- 2x2 factorial design with two treatments:
 - Evidence standard (low vs. high)
 - Whether evidence standards are explained to policymakers

Table 1: Treatment arms: 2x2 factorial design

| | Lower Tier | Higher Tier |
|-----------------------|-------------------|--------------------|
| No information | Control | High and no info |
| Information | Low and info | High and info |

Treatment 1, Choice of policy - descriptive statistics of DoE's database

Treatment 2, Information on evidence standards

From DoL's CLEAR database:

"High Causal Evidence standards mean there is strong evidence that the effects estimated in this study are solely attributable to the intervention being examined. This does not necessarily mean that the study found positive impacts, only that the analysis meets high methodological standards and the causal impacts estimated, whether positive, negative, or null, are credible. Currently, only well-implemented randomized controlled trials can receive this rating"

"Low Causal Evidence standards mean there is little evidence that the effects estimated in the study are attributable to the intervention being examined, and other factors are likely to have contributed to the results. This does not imply that the study's results are not useful for some purposes, but they should be interpreted with caution. Causal studies that do not meet criteria for a high or moderate evidence rating receive this rating."

- Ideally: partner with a 3rd party organization and examine:
 1. Whether or not a meeting was established.
 2. Seniority of the individual with whom a successful meeting was granted (as in Kalla and Broockman (2016)).

- Ideally: partner with a 3rd party organization and examine:
 1. Whether or not a meeting was established.
 2. Seniority of the individual with whom a successful meeting was granted (as in Kalla and Broockman (2016)).
 - May also allow us to engage in participant observation (qualitative data)

- Ideally: partner with a 3rd party organization and examine:
 1. Whether or not a meeting was established.
 2. Seniority of the individual with whom a successful meeting was granted (as in Kalla and Broockman (2016)).
 - May also allow us to engage in participant observation (qualitative data)
- Alternatively: email response rates

Email example

Add screenshot of potential email

Treatment effect estimation

Primary effects (ATE)

- Block random assignment.
- $ATE = \sum_{j=1}^J \frac{N_j}{N} ATE_j$
 - Where J is the number of blocks, blocks are indexed by j , and $\frac{N_j}{N}$ represents the share of subjects who belong to block j .
- P-values calculated using randomization inference.
- Control group = Low quality evidence + no information

Heterogenous treatment effects (CATEs)

- Party, ..., ?
- Note preregistration, multiple comparisons, and power.

Power analysis assumptions

- $N = 535$ (federal) and 1000 (state)
- Low quality evidence + information provision = -10%
- High quality evidence + no information provision = +5%
- High quality evidence + information provision = +12.5%
- Standard deviation = 0.08

Power analysis: federal

Power analysis: state

Conclusion

Timeline and questions

- **Ideal timeline:** pre-registration and initial contact with 3rd party organization by end of 2019, roll-out of the experiment in the first half of 2020 (political context)
- Use a **neutral or partisan policy** proposal?
 - Partisan policy proposal might allow us to test legislator's motivated reasoning, but power issues.
- Better **outcome measurements**?
- Suggestions for kind of **organization to partner with**? Is organizational partnering feasible?
- Federal, state, or local level?
- Other suggestions?

Supplemental material

Existing field/audit experiments

Table 2: Audit experiments conducted with U.S. policy-makers

| Reference | Federal/State | Arms | Treatment | Design |
|-----------------------------|--|------|--|---|
| Bergan (2009) | State (New Hampshire) | 1 | Contacted by activists | Matched pairs (multimembered districts) Randomization by district size and district size |
| Butler and Broockman (2011) | 4,859 state legislators (44 states) | 2x3 | Black or white name and party (D/R/blank) of email sender | Block randomization by state, chamber, party, and whether legislator is up for reelection |
| Kalla and Broockman (2016) | US Congress 191 offices that had not yet sponsored bill | 1 | Reveal in email that prospective attendees had contributed to campaigns | Blocks of 3 offices with similar covariates 1 treated, 2 control of the 64 blocks |
| Doberstein (2017) | 1,108 Canadian bureaucrats | 2x2 | Source of the policy information (academic, think tanks, research-based advocacy groups) | Sources in treatment group were falsified Pre treatment information for covariates |
| Zelizer (2018) | 18 bills 75 state legislators | 1 | Assigned to in-person briefings by a | Treatment assigned at legislator-level |

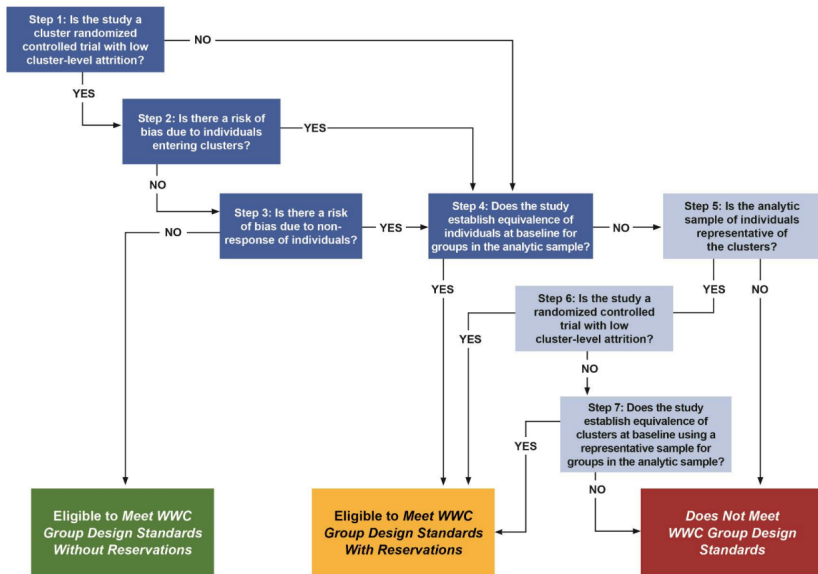

Evidence tiers

Figure II.1. Study Ratings for Individual-Level RCTs and QEDs

Evidence tiers: cluster random assignment

Figure II.4. Review Process for Cluster-Level Assignment Studies

Evidence tiers: instrumental variables

Figure II.6. Review Process for Studies that Report a CACE Estimate

Evidence tiers: missingness and attrition

Figure II.5. Study Ratings for RCTs and QEDs with Missing Outcome or Baseline Data

Evidence tiers: regression discontinuity

Table III.1. RDD Study Ratings

| Standard | To be rated <i>Meets WWC RDD Standards Without Reservations</i> , studies must: | To be rated <i>Meets WWC RDD Standards With Reservations</i> , studies must: |
|--------------------------------------|---|--|
| 1: Integrity of the forcing variable | Completely satisfy | Partially satisfy |
| 2: Sample attrition | Completely satisfy | Partially satisfy at least one of these two standards |
| 3: Continuity | Completely satisfy | |
| 4. Bandwidth/Functional form | Completely satisfy | Partially satisfy |
| 5. Fuzzy RDD | Completely satisfy | Partially satisfy |

Other federal evidence standards and databases

- [Department of Labor](#) (DoL)'s CLEAR's clearinghouse: evidence on labor topics
- [Corporation for National and Community Service](#) (CNCS): evidence on what works in national service, social innovation, civic engagement, and volunteering
- [U.S. Agency for International Development](#) (USAID), YouthPower: evidence on what works in youth and peacebuilding, youth and health, youth and agriculture, food security, and nutrition
- [US Departments of Agriculture and Defense](#)'s ClearingHouse for military family readiness: evidence on wide-ranging family and mental health issues.
- [US Department of Health and Human services](#): multiple databases on programs whose purpose is to prevent and/or reduce delinquency or other problem behaviors in young people, teen pregnancy and substance prevention programs, etc.
- [US Department of Justice](#): multiple databases on drugs and substance abuse, juveniles, crime and crime prevention, victims and victimization, law enforcement, technology and forensics, corrections and reentry, and courts
