Are legislators more responsive to high quality evidence? A field experiment

Angèle Delevoye, Trevor Incerti and Sōm Duchébaggè 29 May 2019

Introduction

Evidence-based policymaking: a bipartisan goal

Introduction Theory Design Conclusion 1/23

Research Questions

• Do policymakers give more credence to high quality research?

Introduction Theory Design Conclusion 2/23

Research Questions

• Do policymakers give more credence to high quality research?

• Can policymakers recognize differences in research quality?

Introduction Theory Design Conclusion 2/23

Theory

Pre-existing literature

• Literature on evidence use in policy-making, on relationship between science, researchers and policy-makers in a democracy

Existing field/audit experiments reaching out to policy-makers

Introduction Theory Design 3/23

Evidence standards

- Evidence standards and descriptions already adopted in federal legislation.
 - Secondary Education Act 65, No Child Left Behind 01, Every Student Succeeds Act 2015 (ESSA)

Introduction Theory Design Conclusion 4/23

Evidence standards

- Evidence standards and descriptions already adopted in federal legislation.
 - Secondary Education Act 65, No Child Left Behind 01, Every Student Succeeds Act 2015 (ESSA)
- Department of Education (DoE) standards tiers under ESSA 2015:
 - Strong causal evidence
 - Moderate causal evidence
 - Low causal evidence
 - High levels of specificity covering cluster-random assignment
 Figure , IVs Figure , and missingness/attrition Figure , and RDs
 Figure .

Introduction Theory Design Conclusion 4/23

- Department of Education (DoE) standards tiers under ESSA 2015:
 - Strong causal evidence
 - Moderate causal evidence
 - Low causal evidence
 - High levels of specificity covering cluster-random assignment
 Figure , IVs Figure , and missingness/attrition Figure , and RDs
 Figure .
- Other federal agencies have adopted similar standards Figure

Introduction Theory Design Conclusion 4/23

DoE evidence standards under ASSA 2015

ESSA's definition of "evidence-based" includes 4 levels of evidence. The top 3 levels require findings of a statistically significant effect on improving student outcomes or other relevant outcomes based on:

(1) Strong

 At least 1 well-designed and well-implemented experimental study (i.e., randomized)

(2) Moderate

 At least 1 well-designed and well-implemented quasi-experimental study (i.e., matched)

(3) Promising

 At least 1 well-designed and well-implemented correlational study with statistical controls for selection bias Required for school improvement plans funded by 7% set aside (Section 1003)

5

Eligible for a priority under 7 competitive grants

The 4th level is designed for ideas that do not yet have an evidence base qualifying for the top 3 levels above. Given the requirement in the second bullet below to examine the effects of these ideas, this evidence-building level can be referred to as "under evaluation."

(4) "Under Evaluation"

- Demonstrates rationale based on high-quality research or positive evaluation that such activity, strategy, or intervention is likely to improve student outcomes
- Includes ongoing efforts to examine the effects of such activity, strategy, or intervention

Included for all other uses of "evidence-based"

Introduction Theory Design Conclusion 5/23

Overview of DoE studies

158 interventions examining 49 outcomes

12 interventions with significant results and same outcome, but analyzed by studies with two different research designs.

	Intervention	Outcome
1	ACT/SAT Test Preparation and Coaching Programs	General academic achievement (high school
2	Dual Enrollment Programs	Access and enrollment
3	Dual Enrollment Programs	Attainment
4	Knowledge is Power Program (KIPP)	English language arts achievement
5	Knowledge is Power Program (KIPP)	General Mathematics Achievement
6	Pre-K Mathematics	General Mathematics Achievement
7	READ 180®	Comprehension
8	READ 180®	Literacy achievement
9	Success for All®	Alphabetics
10	Success for AII®	Comprehension
11	Teach for America (TFA)	English language arts achievement
12	Teach for America (TFA)	General Mathematics Achievement

Introduction Theory Design Conclusion 6/23

Design

Overview of experimental design

- 2x2 factorial design with two treatments:
 - Evidence standard (low vs. high)
 - Whether evidence standards are explained to policymakers

Table 2: Treatment arms

	Lower Tier	Higher Tier
No information	Control	High and no info
Information	Low and info	High and info

Introduction Theory Design Conclusion 7/23

Treatment 1, Choice of policy - descriptive statistics of DoE's database

Introduction Theory Design Conclusion 8/23

Treatment 2, Information on evidence standards

From DoL's CLEAR database:

"High Causal Evidence standards mean there is strong evidence that the effects estimated in this study are solely attributable to the intervention being examined. This does not necessarily mean that the study found positive impacts, only that the analysis meets high methodological standards and the causal impacts estimated, whether positive, negative, or null, are credible. Currently, only well-implemented randomized controlled trials can receive this rating"

"Low Causal Evidence standards mean there is little evidence that the effects estimated in the study are attributable to the intervention being examined, and other factors are likely to have contributed to the results. This does not imply that the study's results are not useful for some purposes, but they should be interpreted with caution. Causal studies that do not meet criteria for a high or moderate evidence rating receive this rating."

Introduction Theory Design Conclusion 9/23

Outcomes

- Ideally: partner with a 3rd party organization and examine:
 - 1. Whether or not a meeting was established.
 - 2. Seniority of the individual with whom a successful meeting was granted (as in Kalla and Broockman (2016)).

Introduction Theory Design Conclusion 10/23

Outcomes

- Ideally: partner with a 3rd party organization and examine:
 - 1. Whether or not a meeting was established.
 - 2. Seniority of the individual with whom a successful meeting was granted (as in Kalla and Broockman (2016)).
 - May also allow us to engage in participant observation (qualitative data)

Introduction Theory Design Conclusion 10/23

Outcomes

Treatment effect estimation

Primary effects (ATE)

- Block random assignment.
- $ATE = \sum_{j=1}^{J} \frac{N_j}{N} ATE_j$
 - Where J is the number of blocks, blocks are indexed by j, and
 ^{Nj}/_N represents the share of subjects who belong to block j.
- P-values calculated using randomization inference.
- Control group = Low quality evidence + no information

Heterogenous treatment effects (CATEs)

- Party, ..., ?
- Note preregistration, multiple comparisons, and power.

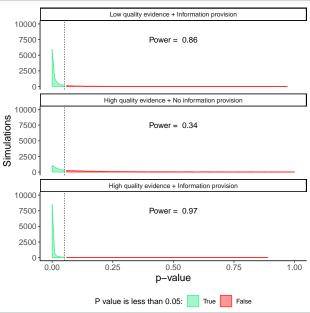

Introduction Theory Design Conclusion 12/23

Power analysis assumptions

- N = 535 (federal) and 1000 (state)
- Low quality evidence + information provision = -10%
- High quality evidence + no information provision = +5%
- High quality evidence + information provision = +12.5%
- Standard deviation = 0.08

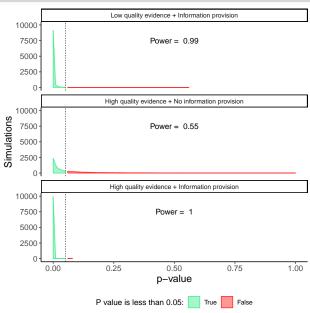

Introduction Theory Design Conclusion 13/23

Power analysis: federal

Introduction Theory Design Conclusion 14/23

Power analysis: state

Introduction Theory Design Conclusion 15/23

Conclusion

Timeline and questions

- Ideal timeline: pre-registration and initial contact with 3rd party organization by end of 2019, roll-out of the experiment in the first half of 2020 (political context)
- Use a neutral or partisan policy proposal?
 - Partisan policy proposal might allow us to test legislator's motivated reasoning, but power issues.
- Better outcome measurements?
- Suggestions for kind of organization to partner with? Is organizational partnering feasible?
- Federal, state, or local level?
- Other suggestions?

Introduction Theory Design Conclusion 16/23

Supplemental material

Existing field/audit experimens

Table 3: Audit experiments conducted with U.S. policy-makers

Reference	Federal/State	Arms	Treatment	Design
Bergan (2009)	State (New Hampshire)	1	Contacted by activists	Matched pai (multimemb Randomizati and district
Butler and Broockman (2011)	4,859 state legislators (44 states)	2x3	Black or white name and party (D/R/blank) of email sender	Block rando by state, cha party, and w legislator is reelection
Kalla and Broockman (2016)	US Congress 191 offices that had not yet sponsored bill	1	Reveal in email that prospective attendees had contributed to campaigns	Blocks of 3 similarity on covariates 1 treated, 2

Evidence tiers: cluster random assignment

Figure II.4. Review Process for Cluster-Level Assignment Studies

Evidence tiers: instrumental variables

Evidence tiers: missingness and attrition

Figure II.5, Study Ratings for RCTs and OEDs with Missing Outcome or Baseline Data Step 1: Does the study use an acceptable approach to address all missing data in the analytic sample? YES Step 2: Is the study a low-attrition RCT NO (counting imputed outcomes as attrition)? NO Step 3: Does the study limit potential bias from imputed NO outcome data, if any outcome data are imputed? YES Step 4: Is the study a high-attrition RCT that analyzes the full randomized sample using imputed data? YES Step 5: Are data in the analytic sample missing or imputed for any baseline measure specified in the review protocol? YES Step 5a: Does Step 5b: Does the the study satisfy study satisfy baseline baseline equivalence equivalence for using the largest baseline difference the analytic sample? accounting for missing or imputed baseline data? YES NO YES Eligible to Meet WWC Eligible to Meet WWC Does Not Meet WWC Group Design Standards Group Design Standards Group Design Without Reservations Standards With Reservations

Evidence tiers: regression discontinuity

Table III.1. RDD Study Ratings

Standard	To be rated <i>Meets WWC RDD Standards</i> <u>Without</u> Reservations, studies must:	To be rated <i>Meets WWC RDD Standards</i> <u>With</u> Reservations, studies must:	
1: Integrity of the forcing variable	Completely satisfy	Partially satisfy	
2: Sample attrition	Completely satisfy	Partially satisfy at least one of these two	
3: Continuity	Completely satisfy	standards	
4. Bandwidth/Functional form	Completely satisfy	Partially satisfy	
5. Fuzzy RDD	Completely satisfy	Partially satisfy	

Other federal evidence standards and databases

- Department of Labor (DoL)'s CLEAR's clearinghouse: evidence on on labor topics
- Corporation for National and Community Service (CNCS): evidence on what works in national service, social innovation, civic engagement, and volunteering
- U.S. Agency for International Development (USAID), YouthPower: evidence on what works in youth and peacebuilding, youth and health, youth and agriculture, food security, and nutrition
- US Departments of Agriculture and Defense's ClearingHouse for military family readiness: evidence on wide-ranging family and mental health issues.
- US Department of Health and Human services: multiple databases on programs whose purpose is to prevent and/or reduce delinquency or other problem behaviors in young people, teen pregnancy and substance prevention programs, etc.
- US Department of Justice: multiple databases on drugs and substance abuse, juveniles, crime and crime prevention, victims and victimization, law enforcement, technology and forensics, corrections and reentry, and courts
